

This story is about the authors' gradual awareness of the historic significance of a WWII relic charcoal kiln in the Australian bush, and the search for details about its creator's life. Dr Kurth comes to life in stories from his boyhood days in the mining districts of Western Australia to his rise into academia at the University of Tasmania. His innovative ways made their marks in a number of ventures including, of course, the investigation into the pyrolysis of wood that led to the creation of the first charcoal kiln able to work 24 hours a day, seven days a week.

This Booklet was produced by the Friends of Kurth Kiln (A0038229J) with funding from the Australian Government Department of Sustainability, Environment, Water, Population and Communities "Your Community Heritage 2012 - 2013 Grant" and Members Contributions.
